NeST SO(3) decode tree on one real image: the beam-MAP path through the Hopf--HEALPix tree

every node is a shaded 3D globe of the Hopf--HEALPix S^2 base; filled HEALPix cells are the density (alpha = probability), hue = the Hopf roll fibre; each branch probability is the model's 8-way softmax

gold = the beam-MAP root→leaf path (branch width ∝ probability); the chosen bin+fibre refines ×8 (pixel ×4, roll ×2) each level
