NeST architecture: an exactly-normalized SE(3) density by construction

ViT-B/16 patch tokens condition a tree-structured softmax over the SO(3)×R^3 partition; every node is a log-softmax, so the product is a normalized density

every node is a log-softmax ⇒ a normalized SE(3) density by construction; output Linear zero-init ⇒ starts exactly at the uniform floor $-\ln(\pi^2 V_{\text{box}})$
