NeST SO(3) decode tree on one real image: the beam-MAP path through the Hopf--HEALPix tree

every node is a true Mollweide projection lifted into 3D; filled HEALPix cells = the S^2 binning, hue = the Hopf roll fibre; each branch probability is the model's actual 8-way softmax

gold = the beam-MAP root→leaf path (branch width ∝ probability); the chosen cell refines ×8 (pixel ×4, roll ×2) each level

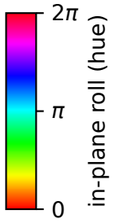

actual input (cube mask)

ViT-B/16 encoder

root $p_0(c_0 \mid x)$
72-way · full density
